the Cleaning of Works of Art: The Residue Question (Research in Conservation):

The cleaning of a work of art often involves removing not only dirt and grime but also unwanted layers of varnish gilding and paint from the work's surface. The challenge for conservators lies in finding a cleaning agent that will act on one layer without affecting the layer being preserved and without leaving any harmful residues on the cleaned work. This book, which examines gel cleaning in the treatment of paintings and painted works of art, presents the methodology. About the Author: Contributors include scientists from the Getty Conservation Institute, California State University Northridge, Fogg Art Museum, the Winterthur University of Delaware Program in Art Conservation, and Winterthur Museum Garden and Library.
